Introduction

Congratulations on your purchase of the Patriot® VR**M12** system (herein referred to as Patriot®). Patriot® has been designed for the vision challenged to regain increased independence and access to information, news, print, **and** daily tasks. With your Patriot® you can explore adaptive access to whatever level you desire.

First, we start with stunning optics producing brilliant contrast magnification assisting you to read and write with reduced eye strain and increased comfort.

Second, with built-in Reader feature you have the option to listen while the printed text on the page is spoken aloud. Sometimes a lengthy documents **s** or a large volume of text is just easier to hear, while giving your eyesight a rest.

What's in The Box?

Included is a 12.4" high definition touchscreen system that is mounted on a custom **folding** stand with adjustable torque positioning **hinges**, **a carrying case**, a power adapter for the Patriot®, **a USB powering cable**, and this User Manual.

The Metal Stand

The Patriot® has a custom stand that has multi positioning to allow for adjustments to suit your comfortability. The stand allows for folding until nearly flat and also has a handle on top for easy carrying and protection.

Power Cable

One power cable is all that is required to use the Patriot®. It is a SAMSUNG® USB cable with SAMSUNG® power block. The power adapter is black with a white USB cable for charging your Patriot®. It is labeled SAMSUNG®.

Using your new Patriot

Step One – Plug the power adapter for Patriot® into a properly grounded wall outlet and the other end into the USB port located on the left side of your Patriot®.

Step Two – Power up your Patriot® by long pressing the power button. The power button is a thin button located two inches from the lower right corner of the touchscreen. It is used to switch power on or off. Otherwise, it can be quick pressed to place the Patriot® in sleep mode or quick pressed again to awake it from sleep mode if it is in sleep mode.

The Patriot® will boot directly into the magnifier, pictured below along with the image in view of what you have placed beneath the camera.

Using the Magnifier:

Hold your reading material under the screen with one hand. With your other hand, use one finger and single tap onto the screen to set the focus onto your reading material.

Next, using three fingers single tap in succession will change the color mode as follows:

Full Color

Brighter Full Color

Positive (Black text on white background)

Negative (White text on black background)

Black text on Yellow background

Yellow text on Black background

Black text on Green background

Green text on Black background

Blue text on Yellow background

Yellow text on Blue background

Next, using your thumb and pointer finger pinch them together and spread apart will zoom text size bigger or smaller.

The lower left corner has a red settings button to make changes to the Magnifier features. These have been set at a typical configuration for most clients but can be explored with double tapping each option on each menu.

Close the Magnifier by double tapping the X button on the upper left side.

Magnifier Buttons:

Switch to Reader

Freeze Image

Settings Menu

Hand gestures:

Use two fingers and place them on to the screen and spread them apart to zoom in

Use two fingers and place them on to the screen and squeeze them together to zoom out

Tap with one finger to focus

Touch with three fingers to toggle through 11 colors

Touch with four fingers together to toggle light on/off

Using the Reader

Touch the icon in the upper right corner. You will hear “Reader Started”. **This will bring you to the screen pictured below along with the image in view of what you have placed beneath the camera.**

Raise the adjustable arm so that it is parallel to the platform below.

Place your document below the raised screen using the front edge as a guide in placement. Look up at the screen to see that the full document is viewed on the screen. This is the basic orientation used to photograph the material to be read aloud. For all practical matters you will not be required to view the top of the screen when working the reader. For now, it is useful to understand the various mechanics by viewing.

When the document to be photographed appears centered onto the screen, then **DOUBLE TAP with one finger on the center of the screen and it will photograph the document to begin the process of converting to speech. You will hear a shutter sound. You may lower the adjustable arm to see the screen being read aloud.**

You can pause by TAP with one finger on any area of the screen, then you may continue by TAP with one finger again on any area of the screen.

You may point to read from a specific word or area of the text by single tap on the area you'd like to read from.

You can adjust size of the document by using the PINCH technique (pointer finger to thumb) and spreading for larger size and pinching for smaller size. You can position the document within view using two fingers dragging to right or left or up and down to navigate to the section of the document you would like to see.

When completed using the Reader, you can exit by **performing a TAP** on the Red X button located on the upper left corner. This will bring you to the next option to photograph another document by repeating the process. Exiting **to go back to the magnifier requires performing a TAP** the **blue magnifier icon located in the upper left corner, as pictured below.**

Reader Buttons:

Switch to Magnifier

Light on / off

 Tired of squinting at tiny text? This innovative tablet-based magnifier lets you see everything in crystal clarity. Explore intricate hobbies, read labels with ease, and rediscover the joy of detailed visual experiences.
